FIRST PLAYABLE / VISUAL TARGET

Evaluation Plan and Measurable Success Metrics | Roll-a-Ball | Prepared by Ethan Guo | October 30, 2026

Milestone Objective

Establish a playable previs target that integrates a consistent art direction, environment blockout, audio feedback, and camera feel. This plan evaluates the saved prototype as one connected player experience, rather than grading isolated assets.

Evaluation Scope

FOCUS AREA	WHAT THE EVALUATOR CHECKS
Art direction	A readable industrial factory visual language across the four course sections, including the player, pickups, hazards, and finish area.
Environment blockout	A traversable route through the maze, rotating machinery, platform-jumping, and narrow balance sections.
Audio integration	Audible feedback for collectible pickup, finish unlock, falling/respawning, and course victory.
Camera feel	A stable rear follow view that keeps the ball and upcoming route visible, with obstructing walls fading and restoring as needed.

Repeatable Test Procedure

1. Open the saved Prototype Gameplay Test scene or its intended playable build. Begin at the start platform and use the documented controls.

2. Make three end-to-end attempts. Record completion time, furthest section reached, falls, checkpoint recoveries, and any route blocker.

3. In each attempt, trigger and record the four audio events: pickup, finish unlock, fall/respawn, and victory.

4. In each of the four sections, check camera stability, player visibility, route visibility, and wall fade/restore behavior. Capture one screenshot per section.

5. Score each category using the rubric on page 2. Attach the score sheet, screenshots, and test notes as evidence.

Scoring rule	Each category is scored from 0 to 4 points. The four categories total 16 points. Use the category bands on pages 2-3. Award points only for observed results supported by test notes or attached evidence; an untested check is not a pass.

Evaluation Rubric

Four criteria aligned to the milestone focus areas. Each is worth 4 points.

1. ART DIRECTION AND VISUAL READABILITY
Success metric: Check the four section screenshots. Count sections that use a consistent industrial factory style and clearly distinguish the player, pickups, hazards, and finish from the environment.
4 points: All 4 sections are visually consistent, and all four gameplay object groups are easy to identify.
3 points: 3 sections pass, or one gameplay object group is difficult to identify.
2 points: 2 sections pass; multiple objects or transitions lack visual clarity.
1 point: 1 section passes; most of the course reads as undecorated graybox.
0 points: No clear visual direction can be identified.

2. BLOCKOUT AND END-TO-END PLAYABILITY
Success metric: Run the complete course three times. Count attempts that reach the finish within 8 minutes without developer assistance, and note any unreachable path or broken transition.
4 points: All four sections are reachable; at least 2 of 3 attempts finish within 8 minutes, with no route blocker.
3 points: All four sections are reachable, but only 1 attempt finishes within 8 minutes or one transition is unclear.
2 points: A route blocker or incomplete transition prevents a reliable full run; 2 or 3 sections remain playable.
1 point: Only the first section is reliably playable.
0 points: The prototype cannot be started or meaningfully played.

Evaluation Rubric - Continued

3. AUDIO INTEGRATION
Success metric: Test four events in each of three attempts: collectible pickup, finish unlock, fall/respawn, and victory. This produces 12 event checks.
4 points: 12 of 12 checks play the intended cue at the correct moment; no cue is missing or unintentionally looping.
3 points: 9 to 11 checks pass.
2 points: 5 to 8 checks pass.
1 point: 1 to 4 checks pass.
0 points: No tested event produces the intended audio feedback.

4. CAMERA FEEL AND INTEGRATED READABILITY
Success metric: Check all four sections during each of three attempts (12 section checks). A section passes if the camera stays behind the player without an unexpected swing, the ball and next route/landing remain visible, and an obstructing wall fades and restores correctly when encountered.
4 points: 12 of 12 section checks pass.
3 points: 9 to 11 section checks pass.
2 points: 5 to 8 section checks pass.
1 point: 1 to 4 section checks pass.
0 points: No section passes, or camera behavior prevents progress.

Recommended target	13/16 points or higher, with no category scored 0. This is a proposed self-evaluation threshold, not a guaranteed instructor grade.

Self-Evaluation and Evidence Sheet

Complete this page after testing. Leave scores blank until the test results are recorded.

Test Record

ITEM	RESULT
Test date / build version	_____
Evaluator(s)	_____
Attempt 1 / completion time / furthest section	_____
Attempt 2 / completion time / furthest section	_____
Attempt 3 / completion time / furthest section	_____

Score Summary

CATEGORY	SCORE	EVIDENCE / NOTES
Art direction and readability	____ / 4	Screenshot files: _____
Blockout and playability	____ / 4	Run notes: _____
Audio integration	____ / 4	12 event checks: _____ / 12 passed
Camera and integrated readability	____ / 4	12 section checks: _____ / 12 passed
TOTAL	____ **/ 16**	Recommended target: 13 / 16 or higher; no zero category.

Evidence Checklist

DONE	EVIDENCE TO ATTACH
[ ]	Four screenshots, one from each course section, showing the visual target and route context.
[ ]	Three playthrough records with completion times, furthest section, falls, and checkpoint recoveries.
[ ]	Audio event log covering all 12 checks (four events across three attempts).
[ ]	Camera checklist covering all four sections in each attempt, including any wall fade/restore issue.
[ ]	Repository commit and push containing the integrated prototype and this evaluation document.

Self-Reflection

What worked as intended? _____

What should be revised before the next milestone? _____
